

Assignment -1

Name : Venkata Swetha Punati

Date : 09/22/2022

In the last class, classmates has shared many new and interesting ideas. Among all the ideas, the pet care idea is very interesting. She shared that her idea is to track pets food intake, health condition and tracking their location.

1. Along , with the points mentioned by my classmates, I would like to suggest about sending indication to owner whenever the pet is in danger situation, with this indication we can save our beloved pets. As the application is already monitoring health condition, I would like to suggest the application which provides medical prescription for concerned health conditions.
2. At initial days, developer can provide the application for free. After few days developer can provide users with discounts and promo codes for subscription. So, in this way both the developer and users can be satisfied.
3. I've been through an interesting app named 'POCKET'. This particular app will allow users to save the articles that are found on the internet. No premium is required to use this app. It is widely used app and is available on Android, IOS, Windows. Pocket app also has a web interface, that users can use it on any of the available web browsers like Firefox, internet explorer, chrome. Users can also download the content of the articles which users can read when they are offline. Users can also save videos, images, tweets using this app. Users can delete the reading list when they complete reading or viewing information. This app is very user friendly and flexible to use.
4. After hearing the ideas from my fellow classmates, I have got to identify a problem from my personal experience.

Based on my personal experience, I would like to create an application which allows students to have a healthy and satisfied meal. So, the application contains a menu of food items as per user taste and health preferences. Food would be get door delivered so that student wouldn't miss any of their meals. Only a healthy body can have healthy brain. The application also notifies when it is time for their lunch or dinner or so on.
